SUMMARY

Data and visualization professional with a background in computer and information science and applied experience in fisheries research, scientific data analysis, and interactive visualization. Experienced in transforming complex marine and environmental datasets into accessible dashboards and visual tools for different audiences, with current experience supporting fisheries research and science communication through ROSA.

EDUCATION

- **University of Massachusetts Dartmouth**, North Dartmouth, MA
  Master of Science in Computer and Information Science — May 2026

SKILL SETS

Technical Skills

- **Programming & Data:** Python, SQL, PostgreSQL, Pandas, NumPy, GitHub
- **Data Analytics & Visualization:** Power BI, Power Query, Excel, Plotly, Streamlit, OpenRefine
- **Web & Development:** Flask, JavaScript, HTML, D3.js
- **Machine Learning:** Linear Regression, Logistic Regression, Random Forest, SMOTE

PROFESSIONAL WORK EXPERIENCE

Responsible Offshore Science Alliance (ROSA) | Remote
Science Scholar Intern — Aug 2026 – Present

- Cleaned and structured FishFORWRD fisheries research data using Power Query Editor.
- Built 8 interactive charts and filters to explore projects by research category, funding source, receptor, and location.
- Designed Research Gaps Analysis dashboards linking research categories, Summarized Research Needs (SRNs), and related FishFORWRD projects by funding source, status, species, and geography.
- Developed an automated Excel upload workflow enabling ROSA staff to independently refresh and repopulate visualizations for ongoing publication.
- Translated complex fisheries research information into accessible visualizations for researchers, stakeholders, and broader audiences.

Sunoida Solutions | Chennai, India
Data Intern — Jun 2023 – Jul 2023

- Engineered optimized SQL queries using joins and aggregations to accelerate internal reporting workflows.
- Cleansed and transformed raw datasets to ensure data quality for downstream analytics workflows.
- Partnered with team members to streamline data retrieval efficiency and query performance.

PROJECT WORK EXPERIENCE

Offshore Fisheries Analytics Dashboard | Python, SQL, Streamlit, Pandas, Plotly — Feb 2026-Mar 2026

- Built an interactive Streamlit dashboard analyzing 70+ years of U.S. offshore fisheries landings data.
- Cleaned and transformed large fisheries datasets using Python, SQL, Pandas, and Plotly.
- Designed dynamic filters and visualizations to identify regional, species-level, and long-term landing trends.

Aviation Accident Detection Using ML | Python, Flask, Power BI — Sep 2025 –Apr 2026

- Analyzed NTSB aviation accident data using Python and Random Forest with SMOTE to predict aircraft damage risk.
- Built a Flask web app integrated with OpenWeatherMap API to deliver real-time accident risk predictions.
- Designed a Power BI dashboard to visualize accident trends, injury statistics, and damage patterns across years.

Credit Card Fraud Detection | Python, Pandas, Scikit-learn, SMOTE, Random Forest, XGBoost — Sep 2025 - Nov 2025

- Preprocessed credit card transaction data and used stratified train-test splitting to develop models for fraud classification.
- Addressed severe class imbalance using undersampling and SMOTE, then trained and evaluated Logistic Regression, Random Forest, and XGBoost models using precision, recall, F1-score, and confusion matrices

---

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Data Analytics Virtual Job Simulation – Deloitte Australia — Jul 2025
- Data Analysis with Python – IBM Cognitive Class — Apr 2025
- SQL and Relational Databases 101 – IBM Cognitive Class — Mar 2025
- **Oceanographic Modeling Webinar** – RWSC — Aug 2026
